

MILSTRIP operator guide

Version 1.2.0 · September 23, 2026

Current status — September 23, 2026: unpublished development app. Intake, validation, review and history have passed synthetic checks. Production delivery is not connected; approval records a review only.

Use the app

Open **MILSTRIP Intake Dev** in Power Apps Studio and select **Preview**. The owner must have development services running. Use approved test data.

 MILSTRIP intake

SYNTHETIC RECEIPT DEMO 2026-09-23

Submit intake

Load recent requests

Allow new submission

More requests

Intake screen with synthetic source text.

- 1

Enter the source

Paste the original email or ticket text. Obtain missing values from the source owner.
- 2

Submit the intake

Select **Submit intake** once. Confirm the **Intake saved** receipt and **Request ID**. Keep the ID for follow-up. If confirmation is missing, follow the submission recovery procedure below.

Validation results

Request: 660ee537-9552-44ad-bfc6-165f83873954

Intake saved | Received: 9/23/2026 4:36 PM

Validation at intake: 2 records | 1 rejected | 0 flagged for review | Delivery: not connected

Load / refresh results

Next results page

History

Intake

Record 1 | VALID | review: NONE

Inspect / review

Record 2 | REJECTED | review: NONE

Inspect / review

MIL-STR-002: Record is shorter than 71 characters

Saved intake receipt with one valid record and one rejected record.

3 Inspect the results

Select **Load / refresh results**, then **Inspect / review** for each record. Read its validation issues. Use **Next results page** when enabled. The canonical record is read-only.

Operator review

Review saved. Approval does not authorize delivery.

660ee537-9552-44ad-bfc6-165f83873954:1 | validation: VALID | version: 1

Canonical length: 80 (trailing spaces preserved)

A2ASTZ08405016819440 EA00001ZZ999926600003 SC0141MKK 15 SMSAA

APPROVED

Synthetic SOP demonstration: record inspected; no operational release.

Save review

Retry same command

Reload after conflict

Results

Review screen showing a saved approval at version 1.

4 Record your decision

Choose **APPROVED** or **REJECTED**, enter a reason of 1–1,000 characters, and select **Save review**. Validation-REJECTED records cannot be approved. Resolve warnings against business evidence; reject or escalate unresolved issues.

5 Verify the saved review

Check the saved message and updated version. Select **Results**, then **Load / refresh results** to confirm the decision.

Audit history

Request: 660ee537-9552-44ad-bfc6-165f83873954

Load / refresh history

More history

Results

9/23/2026 4:37 PM | REVIEW_DECIDED | milstrip-app

milstrip_record: 660ee537-9552-44ad-bfc6-165f83873954:1 | event 20

9/23/2026 4:36 PM | REJECTED | milstrip-app

intake_request: 660ee537-9552-44ad-bfc6-165f83873954 | event 19

History screen showing recorded review events.

6 Verify the audit event

Select **History**, then **Load / refresh history**. Find **REVIEW_DECIDED** for the record; use **More history** when enabled. History contains event metadata; the decision appears in Results. The development audit identifies the shared connection, not the individual reviewer.

Recovery procedures

▼ Submission has no confirmation

Keep the source text and **source ID** shown in the error. Select **Load recent requests** and, if needed, **More requests**. Match the source ID and open the request. If absent, have the owner verify it was not saved before selecting **Allow new submission**. Repeated intake submissions can create duplicates.

▼ Validation requires correction or review

For **REJECTED**, obtain corrected source and submit a new intake; retain both Request IDs. For **REQUIRES_REVIEW**, check the evidence before deciding. Do not edit, trim or reconstruct the canonical record.

▼ Review is unconfirmed or conflicts with another review

For an unknown outcome, select **Retry same command** without changing the retained decision or reason. For a conflict, select **Reload after conflict**, inspect the current review and retained reason, then decide whether another review is needed.

▼ Service is unavailable or the app restarted

After recovery, reload before relying on displayed rows. After restarting the app, reconcile requests and history: unsaved input and pending commands are held only in memory. Give support the Request ID, record number, time and error.

Operator flowchart

Operator procedure

CURRENT DEV

Open MILSTRIP Intake Dev in Preview with development services running.

MILSTRIP | September 23, 2026 | Version 1.2.0

Current operator procedure and recovery branches.

Understand the workflow

Accepted canonical records contain 80 characters. Production item and address lookups remain outside the app.

Confirmation	Meaning	Availability
Intake saved	Source and validation records stored; Request ID assigned	Current
Handoff completed	Agreed production destination accepted the handoff	Required in Phase 2

Confirmation	Meaning	Availability
Downstream received	Receiving system supplied a receipt	Required in Phase 2

Current functional flow

Current functional flow

CURRENT DEV

Development intake, validation, review and audit.

MILSTRIP | September 23, 2026 | Version 1.2.0

Development workflow alongside the separate manual production process.

The manual process loads raw MILS staging, checks references and duplicates, and writes to the order table. App checks have not exercised this downstream process.

Current architecture and acceptance limits

Technical architecture: current development

CURRENT DEV

Existing Default environment, MILSTRIP solution, app, connector and gateway.

NO RUNTIME LINK TO PRODUCTION SQL / no legacy writer, CSV export or FTP delivery

MILSTRIP | September 23, 2026 | Version 1.2.0

Existing connector and gateway, laptop API and local PostgreSQL.

The existing solution, connector and gateway reach a laptop API and local PostgreSQL. Remaining acceptance covers canvas accessibility, conflicts, outages and pagination; shared-user authorization is pending. API retry/conflict checks have standalone evidence.

Phase 2: two production periods

Proposed work assumes a published app.

Period	Implementation	Acceptance
1 — Azure SQL	Hosted API, individual authorization, SQL Server adapter, live checks and controlled handoff	Pilot, duplicate prevention, recovery and operator tests

Period	Implementation	Acceptance
2 — PostgreSQL	Migrate application data, audit history and pending commands; qualify downstream integration	Accepted migration and one writer switch; target December 31, 2026

▼ Production decisions

Resolve the recorded SQL freeze before new writes. Choose one route: recovered SQL handoff or the earlier Rainbow CSV/FTP proposal. Confirm hosting, roles, capacity and recovery ownership. Agree the downstream receipt source; procedure completion, file creation and the legacy SENT flag do not establish receipt.

P2.1 architecture: Azure SQL production

PROPOSED

PROPOSED. Published app is assumed; production hosting and adapters are not implemented.

MILSTRIP | September 23, 2026 | Version 1.2.0

Proposed Azure SQL production architecture.

Proposed release and acknowledgement flow

Phase 2 release and acknowledgement

PROPOSED

PROPOSED production workflow. Handoff and downstream receipt are separate events.

MILSTRIP | September 23, 2026 | Version 1.2.0

Proposed approval, controlled release and acknowledgement.

Release requires current approval, live checks, an authorized role and a durable command ID. Reconcile uncertain outcomes against that command before another attempt.

PostgreSQL architecture

P2.2 architecture: PostgreSQL production

PROPOSED

PROPOSED. Switch only after migration, business parity and production acceptance.

MILSTRIP | September 23, 2026 | Version 1.2.0

Proposed PostgreSQL production architecture.

Separate Stage and Production services on one VM do not provide high availability.

▼ Capacity and cutover

Measure users, batch size, latency, database load and backlog. Test both platforms at twice the expected peak; tune before increasing capacity.

Rehearse, stop writers, capture and reconcile data and pending commands, then switch once. Include application and audit objects. Recovery must preserve new PostgreSQL writes before returning to SQL.

Transition schedule

Two periods: qualify, switch, stabilize

PROPOSED

Q4 2026 is the owner's target. Dates never override the acceptance gates.

BEFORE CUTOVER / two-month MILSTRIP controlled comparison
SQL remains authoritative; PG comparison does not create duplicate production effects.
Start no later than October 31 for a full two-month window ending December 31.
Late readiness means a later date or an explicit gate change, not skipped evidence.

AFTER PG PRODUCTION ACCEPTANCE / 30 stable days of SQL retention
Frozen SQL is a rollback baseline, not an automatic live fallback for new PG writes.
December 31 go-live pushes this window into January 2027.
End-Q4 retirement instead requires acceptance around December 1 and a stable window.

Cutover sequence
Quiesce → capture → reconcile → switch once → observe → separately approve retirement

MILSTRIP | September 23, 2026 | Version 1.2.0

Qualification, production cutover and stabilization schedule.

Allow two months of qualification before cutover and 30 stable days after PostgreSQL acceptance before deciding on SQL retirement. A December 31 launch extends retention into January 2027.

About this edition

Version **1.2.0**. Four real development screens use synthetic data. Evidence: September 23 canvas checks, September 21 legacy review and September 3 migration records; production was not re-inspected. Select **View larger** to inspect an image. Printing includes expanded details.
