

MILSTRIP operator guide

Version 1.6.0 · September 25, 2026

Status — September 25, 2026: Stage **16** and Prod **6** are published for **limited acceptance**. Six memberships and broker-only enforcement are active. Player checks and licensing are verified for the current administrator only. Second-user, role, intake-submission recovery and diagnostic/accessibility checks remain pending. Prod's database stays disabled.

Use the app

Use **MILSTRIP Stage** for approved testing. Select **Check connection**; confirm **STAGE** and **Ready**. Review approval does not deliver an order.

MILSTRIP Stage | Intake

STAGE | Ready | Local PostgreSQL Stage

Submit intake

Load recent requests

Allow new submission

More requests

Intake reference view with synthetic source text.

- 1

Enter the source

Paste the original email or ticket text. Obtain missing values from its owner. Resume an unfinished intake before entering another.
- 2

Submit the intake

Select **Submit intake** once. Confirm **Intake saved** and the **Request ID**; retain that ID. Follow submission recovery below if confirmation is missing.

MILSTRIP Stage | Validation results

Request: ff3f3cb5-04f5-4135-af74-f8db41962673
Intake saved | Received: 9/24/2026 12:59 PM
Delivery: not connected

History

Intake

Record 1 | VALID | review: APPROVED

Inspect / review

Record 2 | REJECTED | review: NONE

Inspect / review

MIL-STR-002: Record is shorter than 71 characters

Saved receipt and validation results for two records.

3 Inspect the results

Select **Load / refresh results**, then **Review record [number]** for each record. Read its issues; use **Next results page** when enabled. Canonical records are read-only.

MILSTRIP Stage | Operator review

Review saved. Approval does not authorize delivery.

ff3f3cb5-04f5-4135-af74-f8db41962673:1 | validation: VALID | version: 1

Canonical length: 80 (trailing spaces preserved)

A2ASTZ08405016819440 EA00001ZZ999926600001 SC0141MKK 15 SMSAA

APPROVED

Synthetic Stage release check: canonical 80-character record verified. No delivery.

Save review

Retry same command

Reload after conflict

Results

Review reference view showing approval at version 1.

4 Record your decision

Choose **APPROVED** or **REJECTED**, enter a reason of 1–1,000 characters, and select **Save review**.
Validation-REJECTED records cannot be approved.
Resolve warnings against business evidence.

5 Verify every saved review

Check the saved message and updated version.
Return to **Results** and refresh. Every record, including invalid records, needs a final decision before another intake.

MILSTRIP Stage | Audit history

Request: ff3f3cb5-04f5-4135-af74-f8db41962673

Results

9/24/2026 1:00 PM | REVIEW_DECIDED | milstrip-app

milstrip_record: ff3f3cb5-04f5-4135-af74-f8db41962673:1 | event 28

9/24/2026 12:59 PM | REJECTED | milstrip-app

intake_request: ff3f3cb5-04f5-4135-af74-f8db41962673 | event 27

Historical audit view; its service actor predates broker enforcement.

6 Verify history and continue

Select **History** → **Load / refresh history**. Find **REVIEW_DECIDED** and the authenticated human actor. Return to **Intake** → **Resume / new intake**; a completed flow clears the form.

Recovery procedures

▼ Submission has no confirmation

Keep the text and displayed **source ID**. Select **Resume / new intake** to reconcile that ID. One matching saved receipt opens Results. An unconfirmed or ambiguous result stays blocked; check again or contact an administrator. Do not submit a replacement blindly.

▼ Corrected source or duplicate content

Finish every record's review before submitting corrected source; retain both Request IDs. Identical normalized content is blocked across users for two hours. Admins/Owners may select **Override 2-hour duplicate block** and enter the required audited reason. Override does not bypass unfinished reviews.

▼ Review is unconfirmed or conflicts

For an unknown outcome, select **Retry same command** with the retained decision and reason. Native review retry passed. For a conflict, select **Reload after conflict**, inspect the current version, then decide whether another review is needed.

▼ Service is unavailable or the app restarted

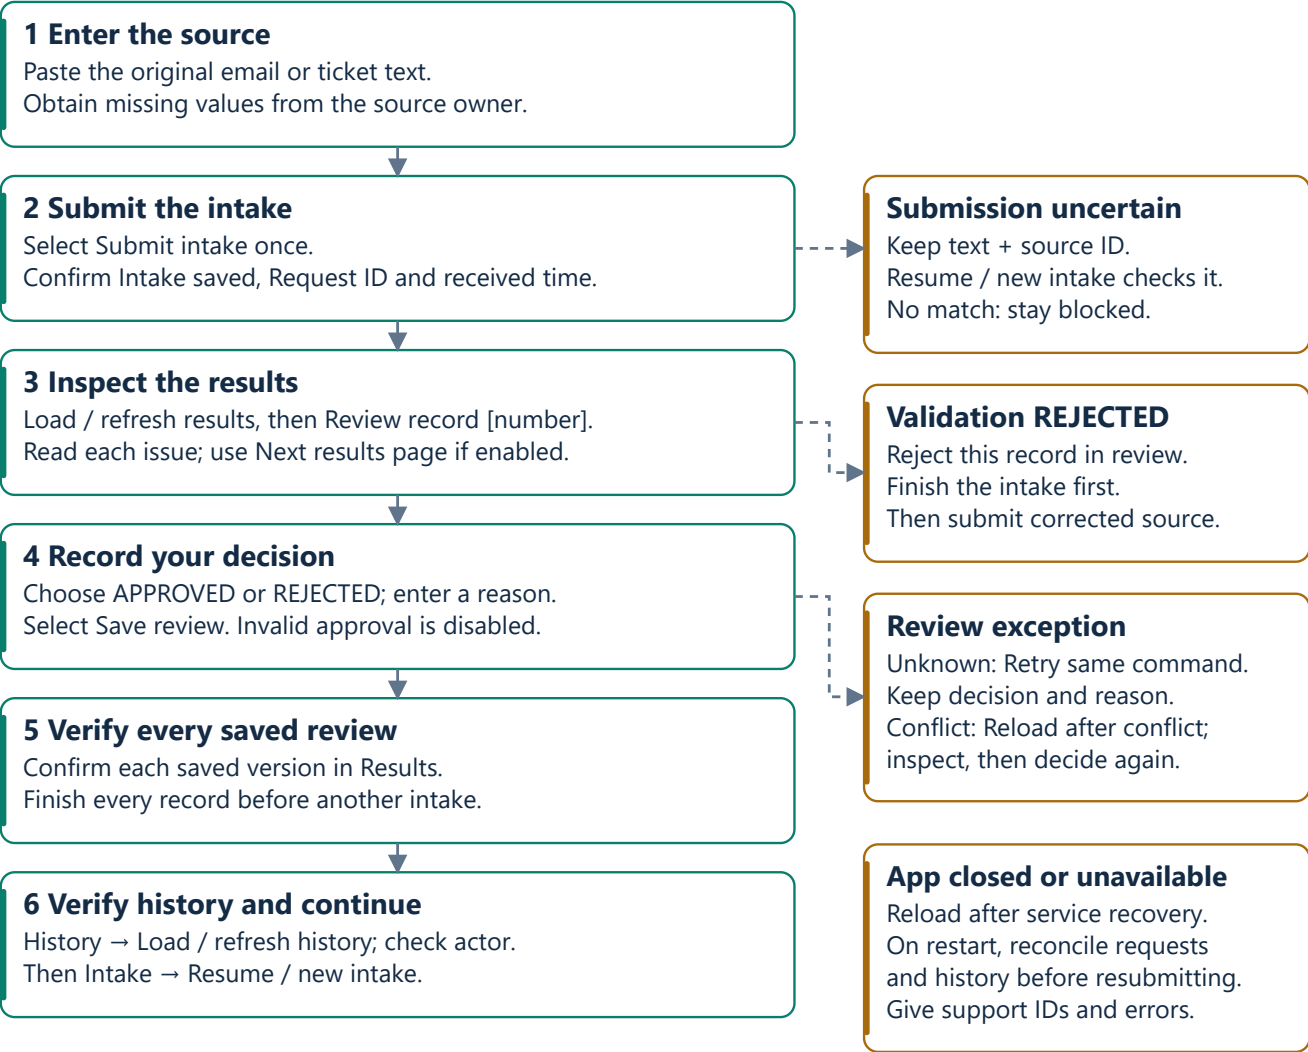

Contact support with environment, Request ID, record number, time and error. Closing loses unsaved input and session commands. Reconcile requests and history after recovery before resubmitting.

Operator flowchart

Operator procedure

CURRENT

Use the intended environment; confirm availability before entering source text.

MILSTRIP | September 25, 2026 | Version 1.6.0

Published procedure and recovery branches.

Understand the workflow

Canonical records contain 80 characters. Production item/address lookups and delivery remain outside this app.

Confirmation	Evidence	Availability
Intake saved	Stored source, validation and Request ID	Implemented
Review saved	Decision, reason, version and human audit actor	Implemented

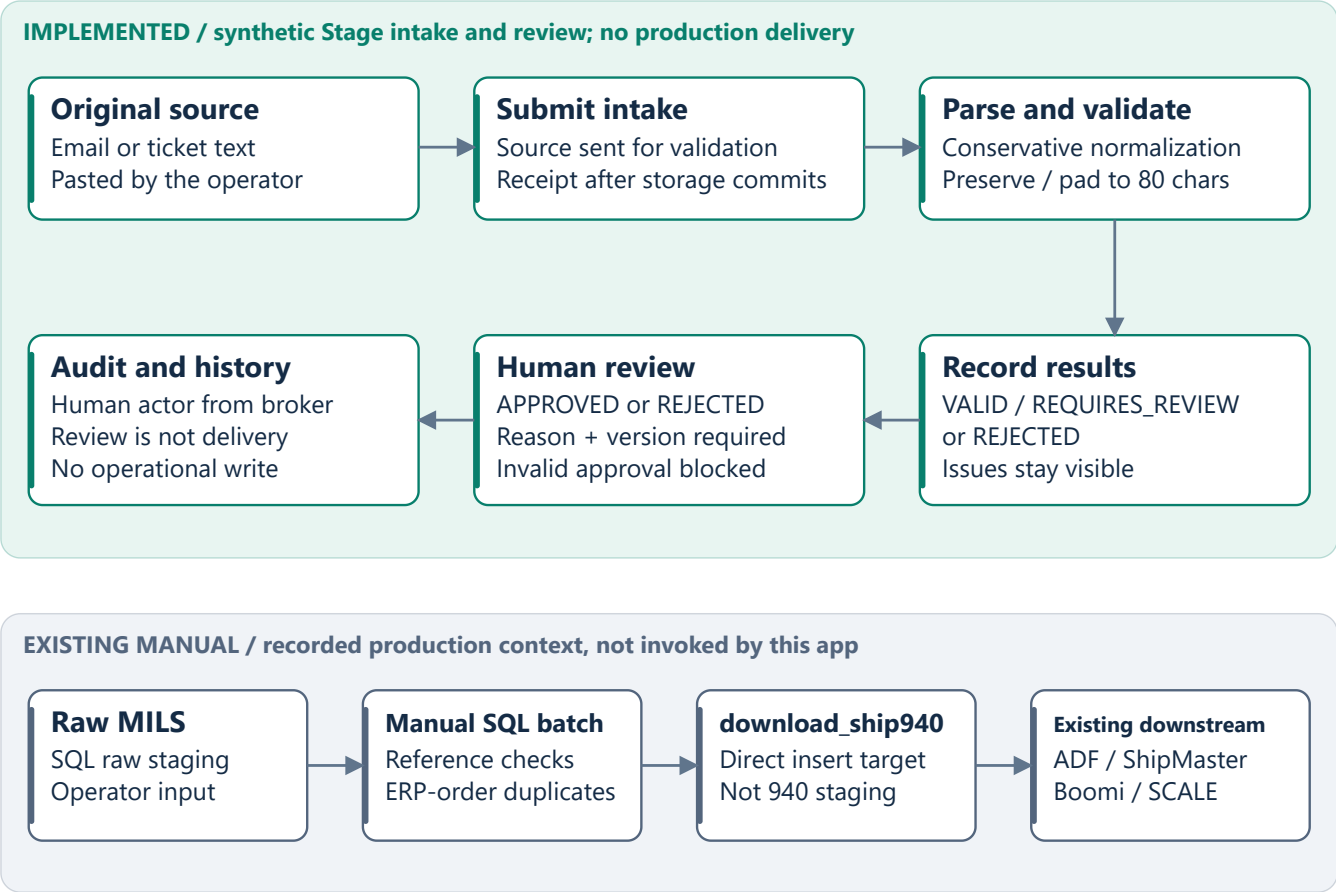

Confirmation	Evidence	Availability
Handoff / downstream receipt	Destination acceptance / receiver acknowledgement	Proposed

Functional flow

Current functional flow

CURRENT

Published Stage: receipt and final reviews verified; remaining native checks continue.

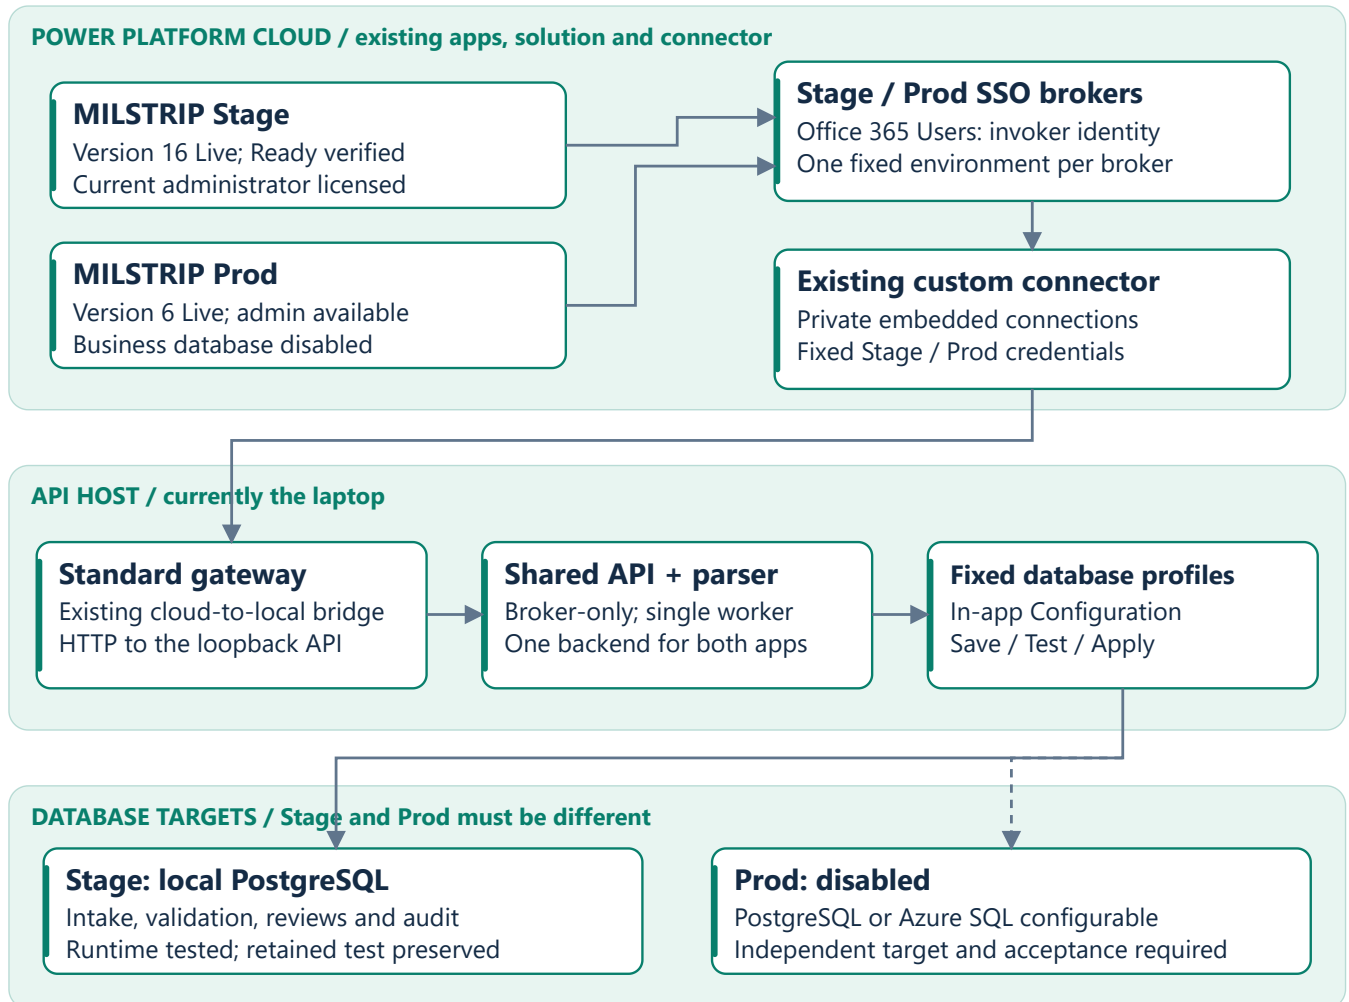

Architecture and acceptance limits

Stage and Prod architecture

CURRENT

Published for limited acceptance; second-user and role checks remain pending.

Both apps share backend releases and restarts. Changing a string does not move data.

Azure SQL runtime and production handoff remain unverified; no downstream delivery.

MILSTRIP | September 25, 2026 | Version 1.6.0

Verified broker connections and current local runtime.

Both broker bindings are verified; one API worker enforces access. Prod's initial startup stalled after connection consent; one read-only browser reload recovered it. The cause is unproven.

Administrator: database configuration

▼ Configuration — Admins and Owners

Open **Configuration** → **Load configuration** in the intended app. Keep provider **auto**; a blank replacement string retains the saved connection. Saved credentials are never displayed.

Select **Save draft**, then **Test draft**. A **PASSED** test of that exact draft permits **Apply draft** within five minutes. Confirm **APPLIED**, then check the connection again. **Discard draft** unlocks editing.

Disable the environment before changing its destination. For initialization, save a draft and confirm its exact displayed target; **Initialize database** requires a disabled environment. It prepares application objects, not a new database service. Migrating history remains separate from changing the string.

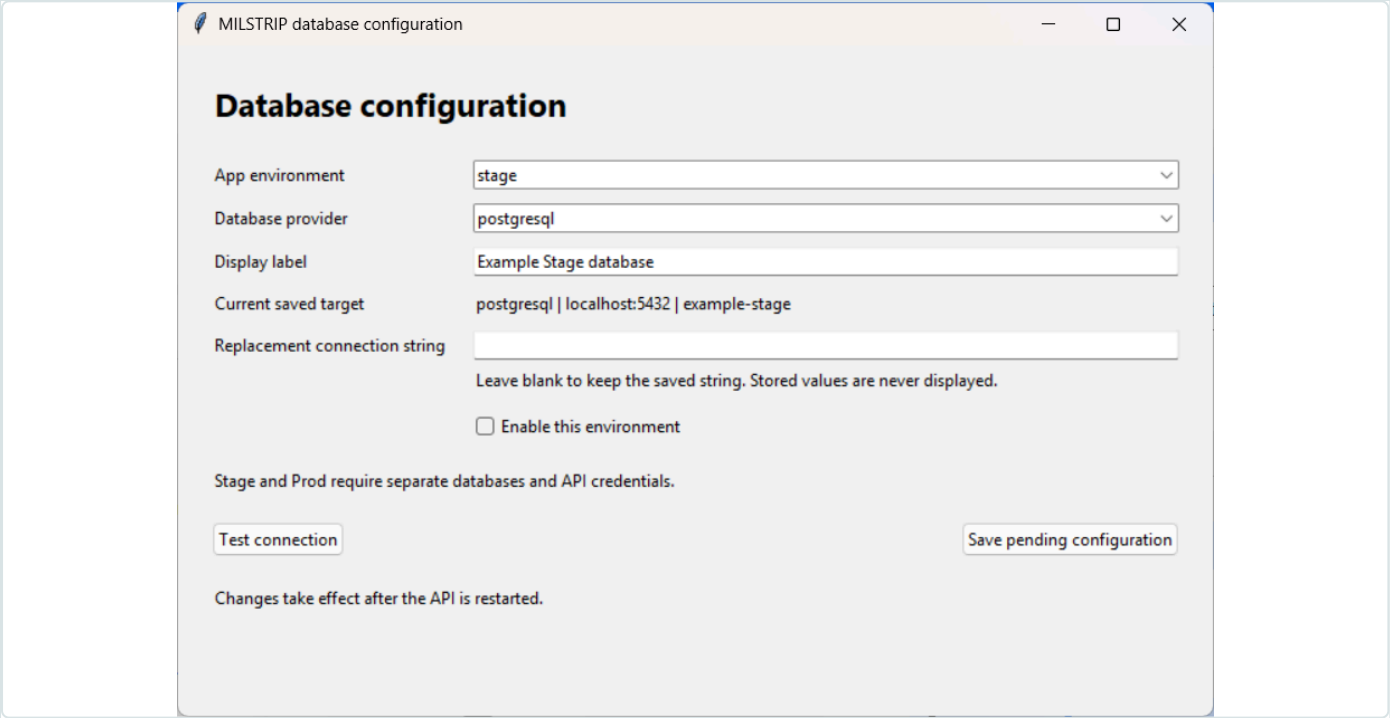

An unknown result retains its command: use **Check command status**, then **Retry same command** if necessary. Native Save/Test/Apply, rejected-command recovery and post-Apply readiness passed.

▼ Users — access and recovery

Select **Users** → **Load users**, choose a member, and **Save access** or **Remove access**. Additions must reach **Access: active | Sharing: completed**. Two Owners are protected; ask another Admin/Owner to change your own access.

For an unconfirmed change, retain the command and **Check command status**; use **Retry sharing** only if needed. One genuine response-timeout recovery passed through status readback without resubmission. Intake-submission recovery still requires native acceptance.

▼ Historical host configuration screen

Earlier host editor with hidden replacement connection; closed after broker-only activation.

Use the in-app Configuration screen after cutover. The host editor is no longer the active-profile authority.

Phase 2: two production periods

Period	Implementation	Acceptance
1 — Azure SQL	Existing Stage/Prod databases; API/gateway on managed network hosts	Hostnames, SQL runtime, roles, pilot and recovery

Period	Implementation	Acceptance
2 — PostgreSQL	Migrate data, reviews, audit and pending commands	Reconciled migration and one writer switch; target December 31, 2026

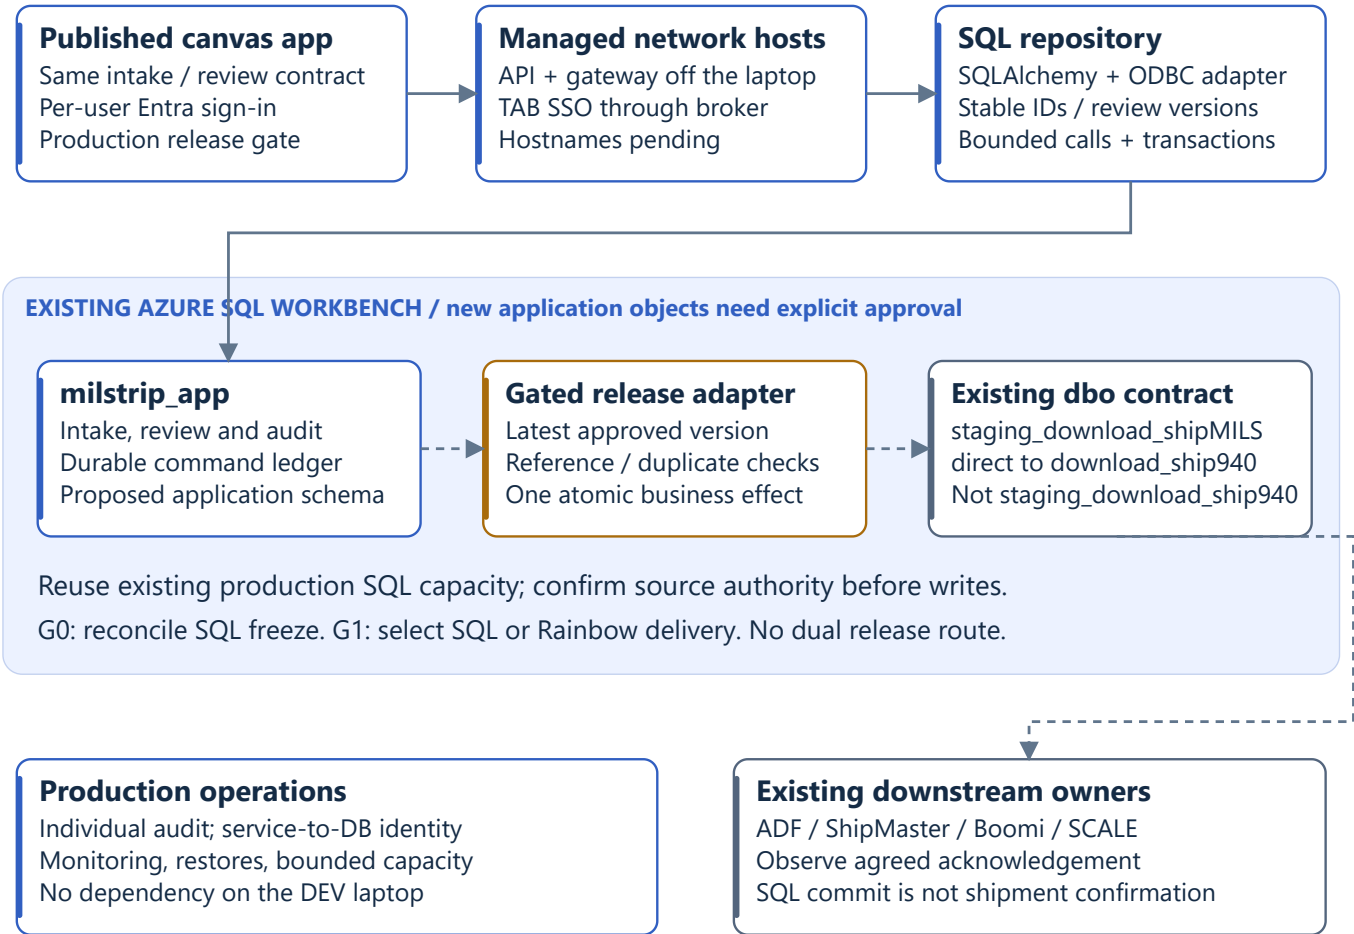

▼ Production decisions

Move API/gateway off the laptop; Power Apps/Automate remain Microsoft-hosted. Keep administration inside Power Apps. Resolve SQL freeze and delivery contract before operational writes.

P2.1 architecture: Azure SQL production

PROPOSED

PROPOSED deployment. Adapter implemented; Azure SQL runtime acceptance is pending.

MILSTRIP | September 25, 2026 | Version 1.6.0

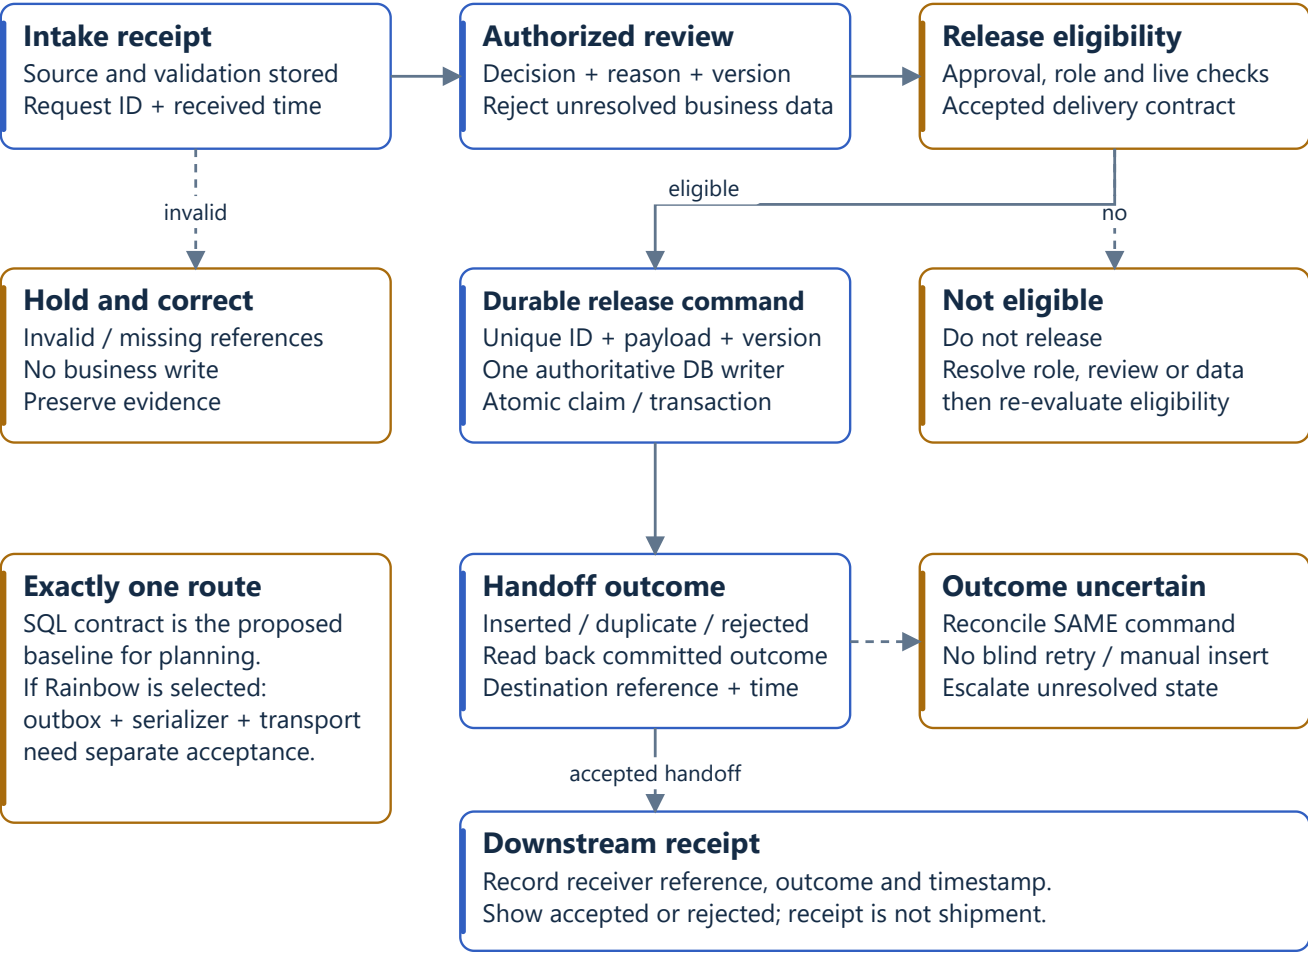

Proposed Azure SQL production architecture.

Release and acknowledgement

Phase 2 release and acknowledgement

PROPOSED

PROPOSED production workflow. Handoff and downstream receipt are separate events.

MILSTRIP | September 25, 2026 | Version 1.6.0

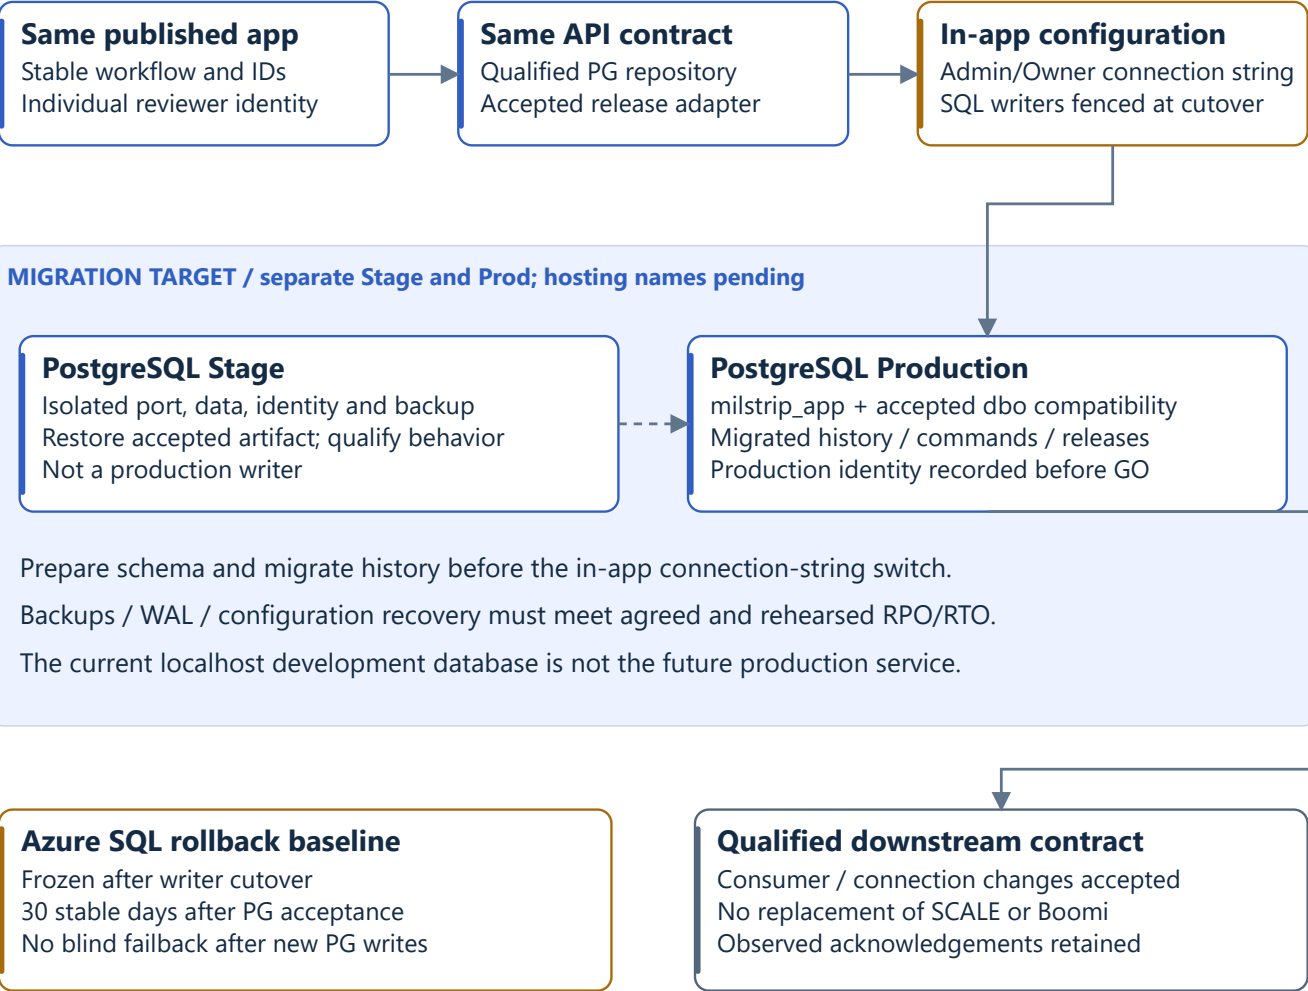

Proposed release and separate receiver acknowledgement.

PostgreSQL architecture

P2.2 architecture: PostgreSQL production

PROPOSED

PROPOSED. Switch only after migration, business parity and production acceptance.

MILSTRIP | September 25, 2026 | Version 1.6.0

Migration before the connection-string switch.

▼ Capacity and cutover

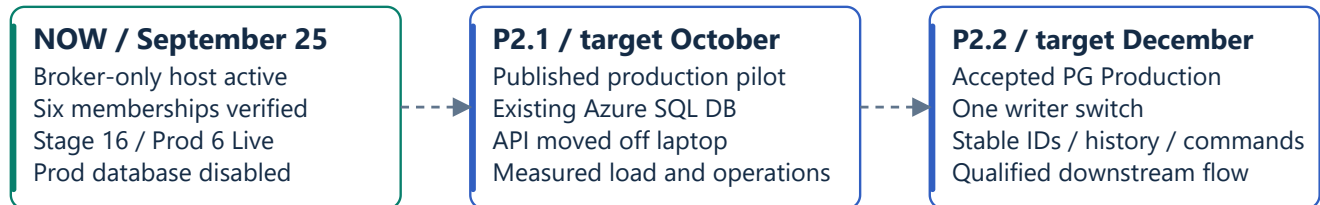

Test both platforms at twice expected peak. Stop writers, reconcile data and pending commands, then switch. Preserve new PostgreSQL writes before returning to SQL.

Transition schedule

Two periods: qualify, switch, stabilize

PROPOSED

Q4 2026 is the owner's target. Dates never override the acceptance gates.

BEFORE CUTOVER / two-month MILSTRIP controlled comparison

SQL remains authoritative; PG comparison does not create duplicate production effects.

Start no later than October 31 for a full two-month window ending December 31.

Late readiness means a later date or an explicit gate change, not skipped evidence.

AFTER PG PRODUCTION ACCEPTANCE / 30 stable days of SQL retention

Frozen SQL is a rollback baseline, not an automatic live fallback for new PG writes.

December 31 go-live pushes this window into January 2027.

End-Q4 retirement instead requires acceptance around December 1 and a stable window.

Cutover sequence

Quiesce → capture → reconcile → switch once → observe → separately approve retirement

MILSTRIP | September 25, 2026 | Version 1.6.0

Qualification, cutover and stabilization gates.

Allow two months of qualification and 30 stable days after PostgreSQL acceptance.

About this edition

Version **1.6.0**, evidence dated September 25. Five September 24 synthetic reference captures predate the current controls and human audit identity. Administration instructions use reviewed source and native checks; production databases were not re-inspected.
